Intro

Today I began to make the initial version of the Attic Framework Application.

Attic Visualization Framework

After a brief survey, I decided to use the ExtJS Library as the basic framework. ExtJS provides a toolkit for web applications with desktop widgets like panels, windows, buttons, checkbox, etc. Another reason to use ExtJS was that I used it for some projects and feel it quite convenient to construct web applications. After reviewing the Library, I made a basic panel frame as shown in Figure .

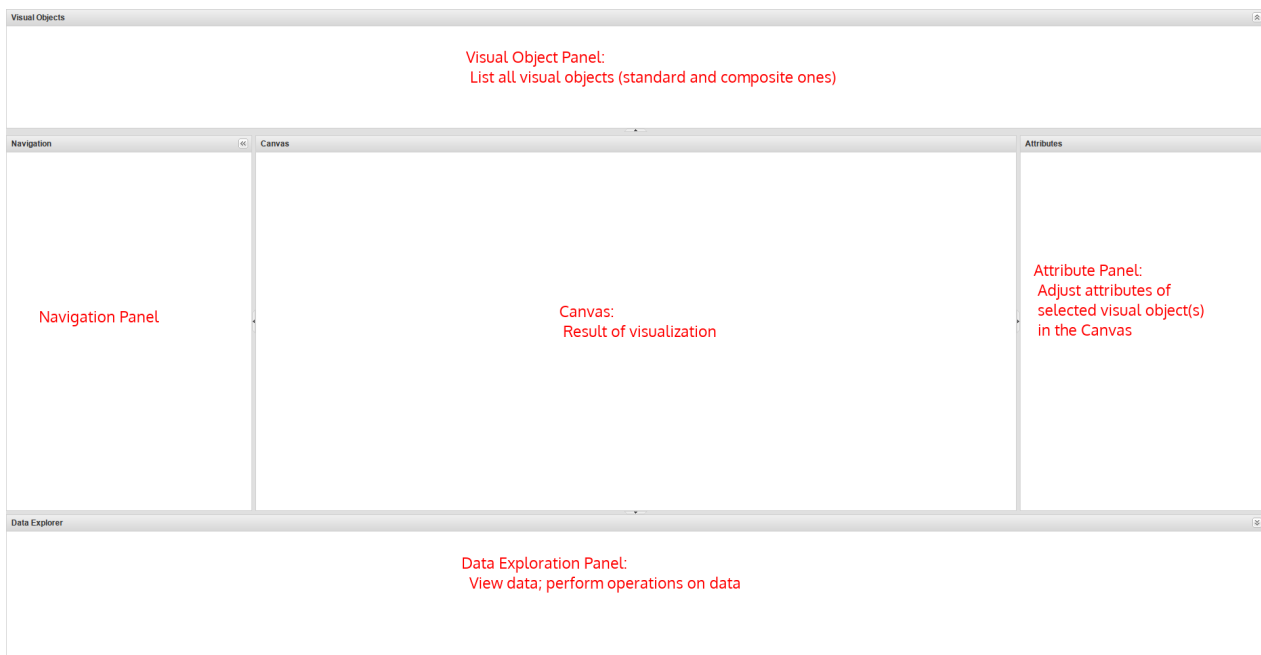

Figure 1: Interface layout design. There are five main regions in total.

Miscellaneous Work

None.

Plan for Tomorrow

- Finish the Visual Object Panel and the Drag-and-Drop effect.
